Update, September 2016. It should be noted that the below section is based on the original watch and not the Series 1 or 2 which feature a 50 percent faster processor.

As with many aspects of this product, experiences have varied among the team, and its likely that day-to-day performance is influenced by factors such as apps and Glances currently running. Its rare to find an app that's near-instantaneous to respond, as they'll open quickly but will often hang, leaving us staring at a black loading screen, and syncing processes with the iPhone, over a Bluetooth connection, can be sluggish.

We've also found, as have many users, that third-party apps can sometimes be slow to start up. watchOS 2 looked to speed up third-party apps by allowing them to run natively on the Apple watch, but as we mention in our watchOS 2 section of the review below, we still find apps pretty sluggish and we often give up and end up using our iPhone apps instead.

Apple Watch review: Using the Digital Crown

Apple's solution to the navigation problem is to use something that has always been a feature of watches in a new way.

The dial on the side of the watch (its proper name is the crown) has been brought into the 21st century and turned into what Apple call the Digital Crown. This Digital Crown solves the problem of swiping through icons on a minuscule display.

Below the Digital Crown is another button. This button takes you to the home screen and to the Friends app, from which you can contact your friends (more on that below). This button is also used when you're paying for things using Apple Pay (more on that below, also).

Apple Watch review : Battery life

Apple claims that on a typical day, with typical usage, you should get 18 hours of battery life from the Apple Watch. In other words, you ought to be able to get through a whole day, but that will be about what you'd expect — you'll need to charge it every night (which, incidentally, rules you out being able to sleep with the watch on, which is likely to be a disappointment to developers of sleep-related apps).

In fact, your use may vary. Apple's typical day included a half-hour workout; if you exercise more than that you may use up the battery quicker. In Apple's tests, the battery lasted 6.5 hours during a workout (so you should at least be able to run a marathon without running out of battery). If you use the Apple Watch to play music you'll also find that to be a bit of a battery hog. Apple got 6.5 hours of audio playback out of the test device before it ran out of power.

Apple Watch review : Apple Watch UK price

Pricing varies depending on the watch and strap you choose. For more information about Watch pricing, read our Apple Watch buying advice.

The Apple Watch price starts at £259 in the UK; that's for the 38mm Apple Watch Sport with a plastic band, and £299 for the 42mm version. The stainless steel Apple Watch starts at £479 and the newer Apple Watch Hermès starts at £1,000, while the 18-carat gold Apple Watch Edition starts at an eye-watering £8,000.
